Guorui Xiao

Mobile: 206-502-9268

Email: grxiao@cs.washington.edu

Website: xertxiao.github.io

#### RESEARCH INTEREST

I am interested in data management, machine learning systems, large language models, and diffusion models.

#### EDUCATION

University of Washington

Seattle, WA, USA

Ph.D. Student - Computer Science; GPA: 3.93/4.0

Expected Graduation:: Sep. 2028

Advisor: Magdalena Balazinska

University of California, Los Angeles

Los Angeles, CA, USA

Masters of Science - Computer Science; GPA: 4.0/4.0

Graduated:: Mar. 2023

Advisor: Carlo Zaniolo

University of California, Los Angeles

Los Angeles, CA, USA

Bachelor of Science - Computer Science; GPA: 3.77/4.0; Cum Laude

Graduated: Dec. 2020

Selected Publications & Manuscripts

[P1] KathDB: Explainable Multimodal Database Management System with Human-AI Collaboration Guorui Xiao, Enhao Zhang, Nicole Sullivan, Will Hansen, and Magdalena Balazinska. To appear in Conference on Innovative Data Systems Research (CIDR) 2026.

[P2] CENTS: A Flexible and Cost-Effective Framework for LLM-Based Table Understanding Guorui Xiao, Dong He, Jin Wang, Magdalena Balazinska. International Conference on Very Large Data Bases (VLDB) 2025, pages 4574-4587.

[P3] Highly Efficient String Similarity Search and Join over Compressed Indexes Guorui Xiao, Jin Wang, Chunbin Lin, Carlo Zaniolo. IEEE International Conference on Data Engineering (ICDE) 2022, pages: 232-244.

[P4] RACOON: An LLM-based Framework for Retrieval-Augmented Column Type Annotation with a Knowledge Graph Linxi Wei, Guorui Xiao, and Magdalena Balazinska. Neural Information Processing Systems (NeurIPS) 2024, Table Representation Learning Workshop.

[P5] Revealing Protocol Architecture's Design Patterns in the Volumetric DDoS Defense Design Space Zhiyi Zhang, Guorui Xiao, Sichen Song, Angelos Stavrou, Eric Osterweil, and Lixia Zhang. IEEE Communications Surveys and Tutorials 2024.

[M1] RACOON<sup>+</sup>: A System for LLM-based Table Understanding with a Knowledge Graph Linxi Wei, Guorui Xiao, Moe Kayali, Dan Suciu, and Magdalena Balazinska. Under review by International Conference on Very Large Data Bases (VLDB) 2026.

[M2] RS-SQL: A Query Language for Supporting Recursive Query Processing over Data Streams Guorui Xiao, Jin Wang, Jiacheng Wu, Carlo Zaniolo. To be submitted to The International Journal on Very Large Data Bases (VLDB Journal)

### Ongoing Research Projects

# UW Database Group (UWDB)

Research Assistant

University of Washington Sep. 2025 - Present

# o Agentic Multi-Modal Database Management System [P1]

- \* Designed and implemented a prototype DBMS powered by LLM agents that answers natural language queries while providing robust, traceable, and explainable results.
- \* Introduced a semantic middle layer that defines modality-aware views, enabling uniform query semantics across heterogeneous data sources.
- \* Proposed an LLM-generated Function-as-Operator (FAO) abstraction that generates implementations of physical operators on-the-fly, improving operator-level explainability and integrating provenance tracking during query execution.
- \* Demonstrated through preliminary experiments how tuple-level lineage can be reconstructed via physical plan and intermediate result materialization.

## UW Database Group (UWDB)

Research Assistant

University of Washington Dec. 2023 - Jun. 2025

- Large Language Model for Table Understanding
  - \* Unified cost-effective LLM-based framework for Table Understanding [P2]
    - $\cdot$  Proposed a unified, cost-effective LLM-based framework for table understanding, optimizing performance while managing token costs within budget constraints.
    - · Devised two novel yet general reducer paradigms to reduce table content and task-specific labels, minimizing misleading information and enhancing LLM comprehension.
    - · Achieved performance improvements of up to 0.21 micro F1 in column type annotation, 0.12 micro F1 in relation extraction, and 0.29 mean Average Precision in schema augmentation compared to baseline models.
  - \* Using RAG to improve LLM performance for Table Understanding [P4, M1]
    - · Led a research intern to develop a novel system RACOON that augments prompts for LLMs using external non-parametric knowledge from a knowledge graph through RAG for a variety of table understanding tasks, achieving up to 0.29 improvement in micro F1 against baselines.

# Scalable Analytics Institute (ScAi)

University of California, Los Angeles

Dec. 2019 - Mar. 2023

Research Intern

- Streaming Data Processing System that Supports Recursive Queries [M2]
  - \* Proposed a high-level query language by drawing inspirations from Datalog for data streams to support expressing recursive queries.
  - \* Devised a lightweight structure Queue-Based Index to avoid redundant computation and further proposed an efficient query evaluation method based on it.
  - \* Designed and implemented a prototype datastream system to verify the effectiveness of the designs.
  - \* Conducted experiments that showed improvements of  $\sim 10 \mathrm{X}$  in throughput and  $\sim 5 \mathrm{X}$  in tail latency.
- Unified Compression Framework to Support String Similarity Queries [P3]
  - \* Proposed the first unified framework for offline and online construction of compressed inverted index to support String Similarity Search/Join applications to avoid expensive disk I/O costs.
  - \* Devised algorithms to achieve near-optimal compression ratio in an online manner with tools like Kernel Density Estimation.
  - \* Conducted experiments that showed we improved  $\sim 5X$  in memory consumption.

# Internet Research Laboratory (IRL)

University of California, Los Angeles

Jun. 2020 - Sep. 2020

Research Intern

## • Systematization of Knowledge: distributed denial-of-service (DDoS) attack [P5]

- \* Systematically selected  $\sim\!250$  papers out of  $\sim\!24,\!000$  works related to volumetric DDoS attack and closely examined  $\sim\!50$  of them.
- \* Performed detailed analysis over selected to derive systematized repeating design patterns and a set of IP network architecture properties.
- \* Categorized the above papers into sub-categories based on their deployment locations, approaches, incentives, etc. and contributed to writing a research paper.

## SELECTED INDUSTRY EXPERIENCE

Apple, Inc.

Seattle, WA, USA

Research Intern

Jun. 2025 - Sep. 2025

#### Multi-Modal and Multi-Task Vision Foundation Model Joint Training

- Designed and implemented a joint training framework that unifies image and video data for a DiT-based video foundation model trained with rectified flow, using flexible data recipes.
- Enabled a single foundation model to simultaneously support text-to-image, text-to-video, and image-to-video generation.
- Conducted experiments demonstrating that this paradigm not only enable new capabilities but also improved frame-wise metrics (e.g., Imaging Quality) and temporal metrics (e.g., Dynamic Degree) compared to a baseline model trained on a single modality and single task.

# Arista Networks, Inc.

Software Engineer Intern

Los Angeles, CA, USA Jun. 2022 - Sep. 2022

#### IEEE 802.1Q Tunneling CLI

- Designed the new module architecture that significantly reduced the code complexity compared to the existing similar tunneling implementation and completed a detailed design document.
- Implemented software-side reactors and hardware-side bit setter that together can filter packets violating user-defined VLAN rules in 802.1Q tunneling.

• Pushed the changes to the next release to be used by all switches over a specific popular platform.

Taboola, Inc.

Los Angeles, CA, USA

Machine Learning/Data Science Intern

Jun. 2019 - Sep. 2019

## Knowledge Base of News Keywords

- Built an end-to-end pipeline with Spark SQL and Java to process data crawled by IBM Watson and further capture their embeddings with Word2Vec.
- Devised algorithms for de-duplicating keywords based on a combined metric, including similar neighbors, lexical similarity, etc.
- Proposed a Knowledge Base representation of news keywords over Neo4j to effectively visualize keywords relationships and implemented an auto-renewal process that runs daily.

#### TEACHING EXPERIENCE

### COM SCI 35L: Software Construction Laboratory

Los Angeles, CA, USA

Teaching Assistant

Fall 2021

- $\circ$  Lectured 20 hours of material focusing on Git, Shell, Vim, Java, etc., to 52 students and held 20 hours of office hours for  $\sim$ 250 students.
- Mentored ~10 groups of undergraduate students completing Node.js/React projects.
- $\circ$  Graded  $\sim$ 250 students' coding assignments and 2 exams.

#### MENTORING EXPERIENCE

## Undergraduate Research Mentorship

Los Angeles, CA, USA

Lindsey Linxi Wei

Jun. 2024 - Jun. 2025

• Mentored an undergraduate student, guiding her research project that produced two first-author papers: one published at NeurIPS 2024 [P4], and another under review at VLDB 2026 [M1].

### Misc

- Selected Languages: Python, C/C++, Java, SQL, Bash, Datalog.
- Selected Platforms: Amazon EC2, Sklearn, Github, Neo4j, Apache Spark, Apache Flink, Spark Streaming, LangGraph, LATEX.
